

# VARIABLE RATE SERVICES

In addition to the innovative technology in our products, ASLE is now bringing Variable Rate Services to your operation, as a value addition to your investment.

## CONVENIENT AND EASY

- ✓ Our VR services can be combined with all our ASLE products and with your standard conventional fertilizers
- ✓ One of our specialists will work closely with you to set up and oversee the process
- ✓ At the end of the season, we will provide you a crop performance analysis per field, including yield information

## ADVANCED TECHNOLOGY

- ✓ ASLE will process all your field information including the creation of zone maps, soil sampling, preparing variable recommendations for fertilizer application
- ✓ In coordination with you the grower and your advisor, we will follow up monitoring the health of your crop using high resolution satellite imagery

## EFFICIENT AND COST-EFFECTIVE

- ✓ Increase productivity and profitability by managing applications of crop inputs and leveraging quality farm data to make smart, profitable in-season decisions.
- ✓ ASLE is adding value at your operation, taking you to the next level of technology in agriculture and contributing to maximize your ROI

At ASLE Technologies Group, we want our growers to earn a profit like never before. We are excited to offer Variable Rate Services. We have a specialist team that will work with you to optimize your inputs and ultimately maximize your yields.

From seeding, to foliar applications, our new service will help you put your inputs where they are needed most. This is not only better for the environment, it's been proven to increase yields and profits.

With cutting edge technology, we will process information including soil tests and zone maps to create prescriptions. Fertilizer application is tailored to each specific zone, resulting in healthy crops, soils, and profits.
